Nguyễn Thanh Đăng

FULLSTACK .NET DEVELOPER

0984 188 671 | dangnt24@gmail.com | Can Tho, Vietnam | github.com/dangnt24

PROFILE

.NET developer with experience building enterprise web applications for Japanese clients and a personal fullstack project using ASP.NET Core, React and PostgreSQL. Currently handle WordPress content, image optimization and on-page SEO at Đăng Nguyên, combining development skills with AI-assisted content and automation workflows.

TECHNICAL SKILLS

Backend: C#, .NET Framework, ASP.NET MVC/WebForms, REST APIs; ASP.NET Core 8 and EF Core (personal project).

Frontend: HTML, CSS, JavaScript, Bootstrap, DevExpress; React, TypeScript and Vite (personal project).

Data: SQL Server queries and stored procedures, MySQL, PostgreSQL, Dapper.

Content and SEO: WordPress, keyword research, on-page SEO, metadata, internal links, FAQ/schema and image optimization.

Tools: Git, Visual Studio, Postman, small automation scripts and AI-assisted workflows.

PROFESSIONAL EXPERIENCE

Đăng Nguyên
08/2026 - Present

Website Content and SEO

- Research keywords and search intent; edit service and location-based articles, check reference sources, and format HTML, headings, tables, FAQs and internal links for WordPress publication.
- Prepare and upload images; convert formats, rename and optimize files, and add relevant alt text and captions.
- Optimize SEO titles, meta descriptions, H1-H3 structure and keyword placement; prepare structured data and review content consistency and readability.
- Use AI and lightweight scripts for content review, image processing and repetitive tasks; organize HTML, metadata and assets for review, handover and publishing.

IVS Joint Stock Company / ABD-CTO
12/2024 - 07/2026

.NET Developer

- Developed and customized enterprise web interfaces with ASP.NET MVC/WebForms, DevExpress, HTML, CSS and JavaScript.
- Enhanced sports administration modules for user groups, logs, ticket revenue, events, schedules, match results and voting; developed REST APIs for spectator-facing applications.
- Contributed to Sport_Event API using PostgreSQL and Dapper; optimized SQL Server queries and stored procedures and investigated production issues.
- Worked with Business Analysts, QA Engineers and developers on features and maintenance using Git-based workflows.

Maple Company
08/2024 - 11/2024

.NET Developer

- Implemented enhancements and resolved defects in C#, ASP.NET and SQL Server applications; supported development, testing and deployment with senior developers using Git.

SELECTED PROJECT

DVP Home | Rental Management Web Application
Active development

Fullstack Developer | Personal project

- Built a public room catalog with location/property, rent and occupancy filters, price sorting, room photos, amenities and rental cost details.
- Developing owner, manager and tenant workflows for properties, rooms, tenants, contracts, deposits, utility readings, invoices, payments, outstanding balances and maintenance requests.
- Connect React/TypeScript to an ASP.NET Core 8 API with EF Core and PostgreSQL; use cookie authentication, role-based access and Hangfire background jobs.

Local development demo: http://localhost:5247/ (available on the development machine).

EDUCATION

Advanced Diploma in Software Engineering
2022 - 2024

Can Tho University Software Center (CUSC) | Graduated with Distinction
